

Skills Certification Agent

Dangerous undetected failures sometimes have very high impact. Prevention starts with having the right people, with the right skills, in the right place.

The Skills Certification Agent (S.C.A.) is a simple tool to identify qualifications, certifications and training requirements of your own staff and third party personnel. It guards that all required qualifications, certifications and training statuses are fit for purpose.

Product scope

Hint wrote a user requirement specification (URS) in close cooperation with Shell. Based on that specification a relational data model was developed, targeted to maximise user friendliness and reporting capability. After approval of the design the concept was implemented by Hint using ASP.Net, C# and Microsoft SQL Server technology, resulting in the S.C.A.

S.C.A.

Users can now log into a secure system. Depending on to which role (group) they belong, they have rights to view, to make changes, make reports, etc.

The application allows adding / removing personnel. Training courses can be assigned to categories of personnel. The status (i.e. course passed) of individuals is recorded. The validity date of the certificates is recorded, to allow defining when personnel is up for recertification.

Internal and external (training) organisations and contractors can update the status of personnel and courses. Certificates of personnel can be uploaded and are available immediately to management for scheduling work assignments.

Software as a Service (SaaS)

Next to standard software deployment, Hint also presents S.C.A. as a SaaS solution. SaaS deployment effectively removes costs associated with hardware, software and hosting fees. Hint SaaS delivers the best support and maintenance possible, no worries about backing up your data, software updates, deployment and security issues.

Benefits

- The Web-based application can be accessed by any authorised user via a standard Internet browser.
- Easily accessible to different user (groups) through a login name and password, with various security levels to limit access to restricted parts of the application.
- Scalable. No "per seat" user license fees.
- Single server, single application, just one central database. Updates are immediately available to all users. No special software needs to be installed on a user's PC.
- Training organisations are responsible for their own data. This eliminates unnecessary administrative activities.
- The professional registration concept increases the appreciation of proper training by employees.

COMPETENCE & CERTIFICATION	
Course	Nomination Date
WVW Basic 3 (2010) AG-10000	05-12-2008
