

Webtrack

Hint Webtrack is our answer to your need for: streamlined logistic processes, identification of products, persons or vehicles, project management and hour registration of specific administrative processes. With Hint Webtrack we can set up a matching system for your specific workflow, collecting and registering of data and presenting the resulting management information.

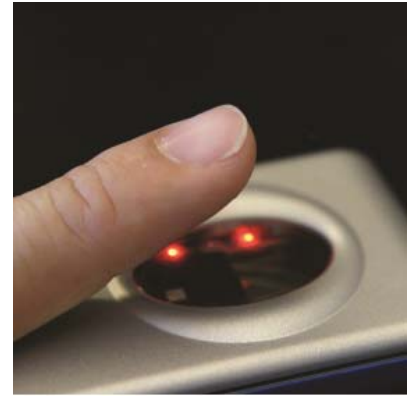

We use standard Web Technology. Web-based solutions have many advantages, including: no user licence costs, worldwide availability and they are easy to expand (because its open software based on international standards).

Custom

Hint is strong in project based execution of custom made software. By analyzing your information requirements we lay the basis for a software solution that is exactly right for you. You can think of special solutions for customer relationship management, project costing and invoicing, but also for example software for hour registration. In most cases this involves extensive database applications matched to your specific company processes.

Although each project is custom made we use standard software and hardware components whenever possible. Our goal is to deliver platform independent solutions whenever this is useful and possible.

Reporting tools are important for presenting the information from several different databases residing at different levels of the automation hierarchy. We can integrate standard tools like Business Objects®, Cognos® and Crystal Reports® in you applications. Only in unusual situations our software solutions involve custom made code. This way we assure that also your future needs for management and process information from the system can be met without costly engineering changes.

Intranet

Hint is a certified solution provider in the Benelux for most of the applicable standard software packages for building Intranet solutions. Through evaluation we select the fit for purpose Intranet solution for you. Starting points are reliability, user-friendliness, adjustability and implementation time. Our Intranet solution is fully equipped with the most common functionality that you expect of Intranet. Customer Relationship and document control together with user management are the basis for an Intranet solution that can be complemented with forum and e-mail functions. Within a period of a few days we can design and install the solution to meet your requirements. After this you can safely modify it yourself in any way you may want.

Extranet and E-procurement

Your customers, suppliers or partners can access your information systems via the Internet using an Extranet solution. Hint can advise you on the right strategy on such projects and specifically on the subject of E-procurement. Your administrative organisation can benefit from this.

We also have a solution for you when you want to set up a web shop or an expert system to advise your customers on-line on selecting and composing a product.

Access control

Access control is frequently required to secure your plant, office building and other facilities and in addition may complement maintenance management. It makes your enterprise a lot safer and secure. Not everyone can enter or leave the premises at any moment. You can always track and trace, who entered your plant, building or location where when and at what time. To make administration easier a time registration system can be added. A camera system and/or biometrical devices can be linked to assure a high level of security. Hint has several years of experience in project execution of access control systems, from engineering to delivery, including after sales maintenance and support. We use standard solutions of such partners as: Nedap (Isolectra), Nexwatch (Honeywell), Bewator (Siemens), in addition to proven technology of other suppliers.

Tracking and tracing - RFID/barcode

Tracking & tracing of materials and products within the production and logistic chain is important from a quality and liability regulation point of view. Especially in the food industry tracking and tracing has found its place. Hint has built up the needed expertise as partner for optimising your company processes. Hint can advise you and implement the right solution when it comes to the application of barcode techniques or the latest development on Radio Frequency Identification (RFID). Hint also gained proficiency in conducting feasibility studies and software selection criteria for tracking and tracing. With this study you can make a well-advised decision for a matching solution. In addition we can evaluate the integration options with your existing Warehouse Management System (WMS) or Enterprise Resource Planning system (ERP). Building of or matching with a Manufacturing Enterprise System, chain integration or internal logistic automation - Hint can help you to find you the perfect solution and make it work.

Cyber Security

Your process control network should provide the highest level of reliability, with high availability and performance to ensure a safe, uninterrupted operation. Hint's cyber security solution suite evaluates vulnerability and risk, recommends appropriate changes, develops the best design for specific requirements, implements the design, and offers continuous management of the environment. Ensure that your process control network is secured against the growing threat from hackers and cyber intrusion.
